IPL PowerPlay Score Prediction

Problem Statement

Predict runs scored in the first 6 overs using ONLY pre-match information — no live ball-by-ball data.

Model Architecture — 4-Model Ensemble + 9-Step Pipeline

Ensemble Layer

Post-Processing Pipeline

3 Key Innovations

1. Live-State Inference

Decode comma-separated player IDs → Count batsmen →
Wickets = Batsmen - 2 → Match-aware prediction

2. Composite Player Stats

Average Strike Rates of entire batting XI + Economies of
entire bowling XI — not just openers

3. Asymmetric Variance Expansion

Boost high-side predictions 1.7× more than low-side (0.25×) —
IPL PowerPlays skew high

Model Performance & Output

MAE: 11.23 runs

Achieved on the Dataset Provided

65

Post-Processing
Steps

match_id	predicted_score
1401_1	52
1401_2	48
1402_1	61
1402_2	55
1403_1	44

Output: submission.csv — ready for leaderboard

Thank You!

Building Smarter Predictions. Powering Better Insights.

- ✓ Robust 4-Model Gradient Boosting Ensemble
- ✓ Cricket-Domain-Aware Post-Processing
- ✓ Leakage-Safe Feature Engineering
- ✓ Live Match State Inference from Test Data
